

A simple frame, then glass and sky

Section A-A at 1:50 on A3 | Cut at plan x = 13.20 m, from courtyard through garden sitting into the shared room

WHAT IS NOW AGREED

A predominantly glazed, shallow single-slope roof.
A broad opening with a plain warm-ivory head.
Continuous flooring and an open connection to the hall.
Solar-control insulating glass, retractable external shading provision, high-level vents and a whole-space comfort assessment.

HEIGHTS BEING TESTED

Roof surface: +2.85 m at court, +3.45 m at the house.
The 0.60 m rise over 3.50 m gives a slope of about 9.7 degrees.
Opening head: +3.10 m; main ceiling beside it: +3.50 m.
That leaves a visible 0.40 m ivory band on the shared-room side.
The earlier +3.20 m garden-roof box was a placeholder; this sloping profile replaces it in the new study only.

WHAT THE DRAWING DOES NOT SETTLE

The opening head is a spatial target, not a sized beam.
The glass/frame system must establish its actual pitch and depth.
The high roof edge, main eave and shading cassette meet closely.
The hall-side roof edge also needs a coordinated connection.
A post-free corner remains an ambition, not a structural result.

THE COMFORT BRIEF

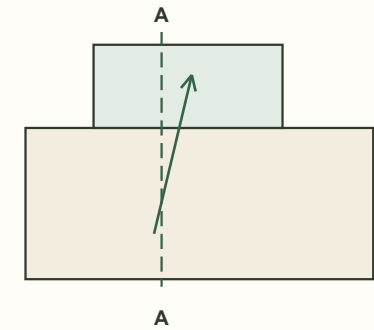

Glass: low-emissivity insulation and solar control, with neutral-looking samples.
Shading: allow for retractable external roof shading; coordinate guides and cassette.
Ventilation: investigate motorised high-level vents with rain control and safe air inlets.
Heating/cooling: calculate winter heat loss and summer overheating for the connected space.
Performance is unverified until glazing, orientation, climate and systems are assessed.

References informing the comfort brief (not selected suppliers or products):

Pilkington: insulating and solar-control glazing

CIBSE: shading, ventilation and overheating assessment

SECTION + CAMERA KEY / DIAGRAMMATIC

Arrow: interior camera toward courtyard.

No compass orientation assigned to the site.

Looking from the kitchen towards the garden

Geometry-based interior perspective | Eye height 1.60 m | Diagrammatic finishes; roof frames and junctions are not specifications

THE INTENDED EXPERIENCE

A plain ivory head frames the glass roof; the same floor continues into the sitting area.
The right-hand opening leads to the shared hall, with the relocated guest/office door beyond.

HOW TO READ THIS VIEW

Furniture outside the garden room is omitted to expose the connection.
The clear corner is design intent. No post-free structure is established.
